

# Search Tools to Gather Feedback on Instruction and Assessment

Search tools allow administrators and teachers to analyze mapped curriculum to do a checkpoint analysis to determine where they are at with target goals and objectives.

Several search criteria are available to allow one to search mapped curriculum units for relevant keywords, and also an assessment search which allows the disaggregation of assessments entered into the curriculum matrices by school building, academic department, grade ranges, or district defined assessment type, or any combination of these.

Results may also be grouped by relevant district defined criteria, and with drilldown capabilities, it is possible to view and analyze subsets of charted results.

Unit keyword searches also allow to filter search results by building, department, grade range, keyword, or any combination of those, and also supports wild card search.

The Unit Keyword Search disaggregates the search results by grade level, displaying a bar for each in the results.
