Nokia 2V Hotspot Edition

**Unlock Connectivity
without Compromise.**

Connectivity is just one of the many unprecedented challenges facing our world today. Challenges we WILL undoubtedly get through together. During these turbulent times Hotspots, Routers, and MiFi devices are in high demand, however, SUPPLY REMAINS SCARCE. With many states implementing stay at home orders; the uptick of work from home, telemedicine, and home education has both businesses and educational institutions stressed over their lack of connectivity.

Ready Broadband has developed a brand new low-cost Handset as a Hotspot alternative available immediately! HaaH [Handset as a Hotspot] is a software configuration that enables us to turn this Nokia device into a SOLELY PURPOSED MOBILE HOTSPOT! Effortlessly suppressing all normal device functionality and software thus "locking" the device into only Hotspot functionality! Bringing the hotspot application and user interface to the main screen on the device.
